ABOUT US

Zaidee Coin is a France-based crypto coin company committed to building a secure, transparent, and decentralized financial ecosystem. Founded with the vision of empowering individuals through blockchain innovation, Zaidee Coin aims to simplify digital transactions and make cryptocurrency accessible to everyone.

Our platform is built on advanced blockchain technology that ensures fast transactions, low fees, and high-level security. We believe in creating a reliable digital asset that supports global payments, investment opportunities, and financial freedom.

With innovation at our core, Zaidee Coin is designed to serve businesses, investors, and crypto enthusiasts worldwide by offering a modern, scalable, and future-ready cryptocurrency solution.

VISION & MISSION

Our Vision

Our vision is to become a globally recognized cryptocurrency that bridges the gap between traditional finance and decentralized finance (DeFi).

Zaidee Coin envisions a world where:

- Digital payments are fast, secure, and borderless.
- Individuals have full control over their financial assets.
- Blockchain technology drives transparency and trust.
- Cryptocurrency becomes a mainstream financial solution.

Our Mission

Our mission is to create a powerful and sustainable crypto ecosystem that delivers real-world utility and long-term value.

We are committed to:

- Developing secure and scalable blockchain infrastructure.
- Promoting financial inclusion through decentralized solutions.
- Ensuring transparency and trust through smart contract technology.
- Supporting innovation in Web3 and digital finance.
- Building a strong global community of users and investors.

Zaidee Coin is not just a cryptocurrency — it is a step toward the future of decentralized finance.

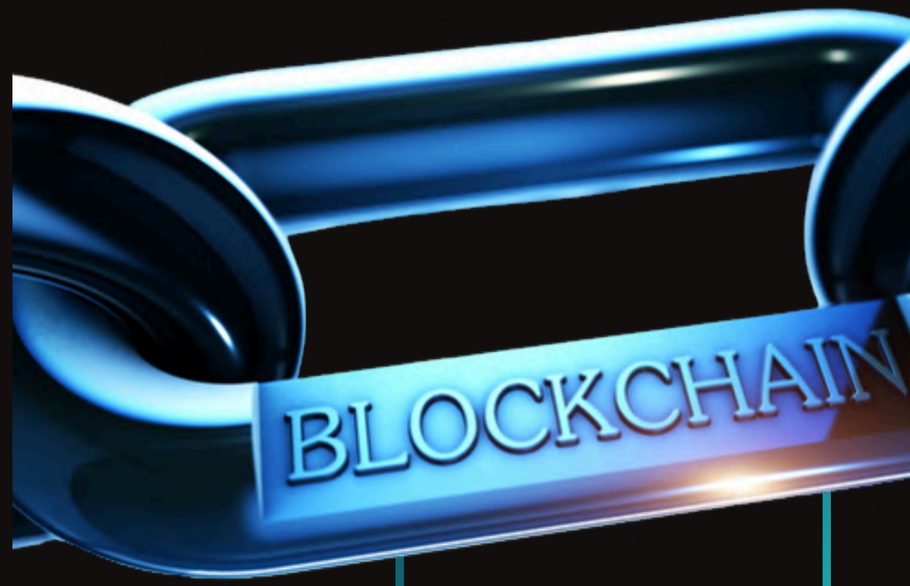
CURRENT STATE OF BLOCKCHAIN

Blockchain technology has transformed global finance, digital assets, and online transactions. From Bitcoin introducing peer-to-peer payments to Ethereum enabling smart contracts, the industry has seen exponential growth. By 2025, the blockchain market is valued at over 3 trillion, showing massive adoption across industries like banking, supply chain, gaming, and healthcare.

Yet, despite this growth, significant challenges remain that limit the true potential of blockchain technology. Many projects fail because they cannot solve issues of scalability, rewards, or trust. To build a sustainable ecosystem, these problems must be addressed effectively.



www.zaidee.io

KEY BLOCKCHAIN CHALLENGES

Scalability Issues

- Legacy blockchains such as Bitcoin and Ethereum often face network congestion, resulting in slow transaction speeds and extremely high fees. This makes them less practical for daily use.

Limited Earning Models

- Most cryptocurrencies rely solely on price speculation. Investors only profit if the token price increases, leaving no structured income model for long-term holders.

Lack of Community Incentives

- A strong community is essential for any project. However, without reward mechanisms, people lose interest and projects struggle to survive.

Trust & Security Risks

- Crypto markets are plagued by scams, rugpulls, and hacked smart contracts. These issues damage investor confidence and make many hesitant to enter the space.

ZAIDEE COIN OVERVIEW

Zaidee Coin (ZDE) is a decentralized digital asset designed to deliver stability, passive income, and long-term sustainability. It leverages the BNB Smart Chain (BEP-20 standard), ensuring speed, scalability, and global adoption potential.

Token name - Zaidee Coin
Token Symbol : ZDE
Token Price - 0.1 USDT
Token Supply :- 21 Million
Network - Binance Smart Chain
Token Standard - BEP20

This dual-supply reference reflects the evolution of project design: while the Whitepaper originally set the supply at 1 billion tokens, the updated business plan introduces a 7 billion coin structure to allow for broader community rewards, global circulation, and ecosystem expansion.

www.zaidee.io

WHY BNB SMART CHAIN (BEP-20)?

The choice of blockchain is critical to the success of any crypto project. Zaidee Coin is built on BNB Smart Chain (BSC), using the BEP-20 token standard.

- ✓ **High Transaction Speed**
  - Transactions on BNB Smart Chain are finalized in just a few seconds.
  - Compared to Ethereum, which often experiences delays during network congestion, BSC offers near-instant transfers, a crucial factor for ., referrals, and e-commerce applications.
- ✓ **Low Transaction Fees**
  - Average transaction cost on Ethereum can range between $5–$50 depending on network demand.
  - On BNB Smart Chain, the cost is usually below $0.50, making it far more affordable for everyday users and global adoption.
- ✓ **Compatibility & Accessibility**
  - ZDE can be stored and transacted on all major wallets that support BEP-20 tokens, including Trust Wallet, MetaMask, and Binance Wallet.
  - This ensures that users can easily manage, send, and stake their Zaidee Coins without relying on complex or custom-built infrastructure.
